Written Project Reports Due Thursday, May 14, 2003, 4:00 pm to Linda Hall, Ho 113
Oral Project Reports Due Monday, May 5, 2003, 1:15 pm Ho 312

A single report is required from each student group. Your report should include the following:

- Abstract (250 words or less)
- Introduction (1+ pages)
- Experimental apparatus and procedures including a sketch of the experimental apparatus, with all relevant dimensions, and the coordinate system. A discussion of uncertainty should be included (2+ pages)
- Results and discussion (2+ pages)
- Summary and conclusions (0.5+ pages)
- Recommendations for future research (0.5+ pages)
- A reference section (as needed)

You do not need to report all of your results – only the results necessary to support your major conclusions. Consider this to be similar to a paper you would submit to a journal. Too much information can confuse your points (and journals will not let you include 100 figures!).

Your presentations can be by a single member or multiple members in the group (e.g., somebody handles the set-up, another the results, and perhaps another the introduction and/or conclusion).

A PC projection system will be available as well as an overhead projector.

20% of your project grade will be based on the quality of your presentation.
